Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gantner (US 5,025,870) in view of Minamidate (US 4,282,938).

With respect to claims 1 and 6, Gantner discloses a vibration-decoupling arrangement comprising: a helical spring (10) arranged between the percussion unit (electric motor, piston, gear mechanism) and housing (2); an engagement point (1a) in the housing; an axial guide means (34b); two axially spaced articulating arms (7) secured in the housing.

However, Gantner fails to disclose if the two arms are flexurally deformable.

Minamidate teaches leaf springs (18, 18a) for supporting the vibration source, articulating and deformable secured in the housing with limited axial displacement.

Therefore, it would have been obvious to one skilled in the art at the time the invention to provide the power tool of Gantner with flexural deformable arms since the power tool and its vibration-decoupling arrangement will perform the same task as the present invention.

With regard to claim 2, Gantner discloses two articulating arms parallel to each other.

With regard to claims 3 and 4, the modified Gantner vibration-decoupling arrangement would have included the spring (18, 18a) of Minamidate, which has a curved middle section for resisting deflection and for reinforcing the spring in at least one direction.

Art Unit: 3721

With regard to claim 5, the modified Gantner vibration-decoupling arrangement would have two articulating arms oriented in opposite direction (fig. 6).

Conclusion

Refer to attachment for notice of references cited and recommended for consideration based on their disclosure of limitations of the claimed invention.
